

Challege 4 Objects = { :"Sami", : 44, }

deleteProp(obj, prop)

This function deletes a specified property from an object and returns the modified object. It takes two arguments: obj, which is the object being modified, and prop, which is the property being deleted.

numObjectProps(obj)

This function returns the number of properties in an object. It takes one argument, obj.

shoppingCart(cart)

This function takes an array of objects, where each item represents an item in a shopping cart with a name and amount property, and returns the total number of items in the cart.

compareObjects(obj1, obj2)

This function compares two objects and returns true if they have the same keys and values and false otherwise. It takes two arguments, obj1, and obj2.
